First time setup for Walmoo Web Terminal

1. You need driver for NFC reader (ACR122U)

http://www.acs.com.hk/en/driver/3/acr122u-usb-nfc-reader

2. Walmoo Applet certificate can be found here:

http://dev.www.walmoo.com/applet/walmoo.p12

3. Windows certificate setup:

 - Look for JAVA in Control Panel (If you can't find it, you should download it – check if you have Java

https://java.com/en/download/installed8.jsp)

 - Click button "manage certificates"

 - There is dropdown with "certificate type"

 - Must import certificate in all type of certificates EXCLUDING "Client Authentication"

4. Open business.walmoo.com/app (Doesn't work on Chrome)

5. Check if browser is blocking Java plugin. Set to "Allow and remember" (Maybe need to reload app)

6. Follow the instructions (Add device, Edit device in Admin Panel under Settings->Devices and add it to some Terminal)

7. Reopen business.walmoo.com/app

8. May need to verify to Run Java once again:

P.S. You must have **ACR122 NFC reader**!!!

Java for Mac?
